Revitalizing Rockford: Auburn and Main Roundabout

Owner: City of Rockford

Consultants: MTJ Engineering, LLC / McClure Engineering Associates, Inc. /
Sanders Design Group / SAA Design Group, Inc.

The intersection of Main and Auburn streets in Rockford, Ill., serves more than 30,000 vehicles daily. The city of Rockford wanted to provide a safe, efficient means of travel through the intersection while having the least negative impact on nearby properties. The city also sought a design that is conducive to business development and revitalization.

The city selected Hanson Professional Services Inc. to provide design services for Illinois' first multilane roundabout on a state highway. The new roundabout provides not only a safe and efficient solution with the least effect to properties, but a cheaper alternative than traditional intersection improvements
